Your Source for Environmental and Industrial Safety Products

Introducing our 2009 edition of Environmental and Industrial Safety Products. We have all the products you'll need to make your work safer and more productive. For over 24 years we have been Canada's Source for the best in safety products. You can rely on us to provide you with quality name brand products and unparalleled service. Be it a special order item or everyday consumables our experienced sales team is ready to meet any and all of your requirements.

This catalogue is packed with thousands of trusted products from leading suppliers such as 3M, North Safety, MSA, Kimberly Clark, Miller, Allegro and X-Guard, just to name a few. We stock tens of thousands of products in our warehouses that can be shipped out for next day delivery. With 7 locations across the country, we are able to get you what you need, when you need it!

FRIENDLY SERVICE. When you call, a real person answers, and our team of customer service representatives is dedicated to helping you to get what you want, when you need it. They will make the process simple and straight forward, from opening an account, to ordering and arranging delivery.

FREE TECHNICAL SUPPORT. Any time you have a product question, call us at **800.465.3898**, and one of our trained staff members will be available to help you on the spot. We re-train our staff regularly to ensure you get the best service possible. So when you have a question give us a call **FREE** of charge! NO Purchase necessary. We'll give you the answer.

FAST DELIVERY. We get your order processed, packed and on its way within one business day. With 7 locations across Canada we'll get it to you, when you need it

100% SATISFACTION GUARANTEE. If something isn't right, we will fix it, guaranteed. We will replace it, find a replacement product or simply return or credit it. No questions, no complications, at no cost to you, we'll make it right.

Call us today. Whatever you need, you'll get it quickly and from one reliable source.

Best Regards,

Nak Tsounis
President

P.S. If you don't get what you need, when you need it, or aren't satisfied with my team's efforts call me direct.

Friendly, Courteous, Personal Service

Customer Service that focuses on taking care of your needs

Our customer service team prides itself on its quality service to our customers. Expect friendly, prompt service from our team of real, caring people. Ask us about products, prices, delivery times, in-stock availability, quotes, returns, exchanges or about our 100% Guarantee.

CUSTOMER SERVICE

We're here when you need us, ready to take your orders and answer your questions.

DELIVERY

Our drivers and warehouse staff get the job done. We process your order, pack it, and send it on its way within one business day.

WE'RE CLOSER THAN YOU THINK

With our 7 locations across Canada we'll get it to you, when you need it.

100% GUARANTEE

If you're not happy or if something isn't exactly right with your order, just call and we'll replace it, find a similar product, credit you, or give your money back. We'll fix it.

LARGE QUANTITY QUOTES

Need large quantities of product? We'll see what we can do to get a better price for you. Call us for a no-obligation quote and we'll be competitive.

We will not be undersold on any of our product offering. Show us a price and we'll beat it.

CATALOG REQUESTS AND SERVICE

Need a catalog? Just call us and let us know and we'll send it. We also provide catalog service to ensure that you don't receive duplicate catalogs, fix an incorrect name or address, or take you off our mailing list if you wish.

Training

Safety Express Training provides top level instruction and education for all your workplace safety requirements and specialized certification needs.

Everything from our half day complimentary demo and awareness sessions, to our full multi-day certification courses, are facilitated by industry experts and professionals in our newly expanded Safety Express Ltd. Training Centre in Toronto and various locations across the country. We are committed to being the leaders in providing you with the latest information regarding industry advancements and the latest in industry and government regulations to ensure you are leaders in your field of expertise.

Institute of Inspection, Cleaning and Restoration Certification (IICRC) Training Series

WRT - Water Damage Restoration Technician

This IICRC approved class covers the essentials of water damage restoration in more detail than ever before. Newly revised instructional materials and workbooks provide the most up-to-date information in the industry. Learn the basics of the industry, psychrometry, equipment and forms. It's ideal for technicians and those new to the industry. An IICRC exam is available upon completion.

FSRT - Fire & Smoke Restoration Technician

This IICRC approved class is a two-day seminar presenting all of the basic concepts and systems of the restoration process. You will learn how to clean soot and other contaminants from contents and structures. You will also learn how to perform deodorization for smoke contaminated air spaces, contents and structures. You will learn how to safely use specialty restoration chemicals, supplies and equipment.

OCT - Odour Control Technician

This IICRC approved class covers the essentials of water damage restoration in more detail than ever before. Newly revised instructional materials and workbooks provide the most up-to-date information in the industry. Learn the basics of the industry, psychrometry, equipment and forms. It's ideal for technicians and those new to the industry. An IICRC exam is available upon completion.

HST - Health & Safety Technician

This two-day course focuses on increasing safety in your workplace. Course topics include OSHA standards, inspections, citations and penalties, record keeping, confined spaces, personal protection equipment and much more. Exam fees (\$50 US per person) are additional and must be paid at time of exam. All cheques for exams can be made payable to the IICRC.

AMRT - Applied Microbial Remediation Technician

This is a four-day practical and hands-on course certified under IICRC. This course builds on the water restoration courses and gives the student a greater understanding of water damage and mold related losses.

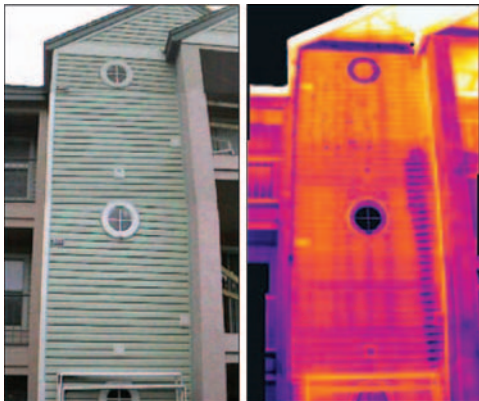

Thermal Imaging Training Series

Thermal Imaging
Level I - Certification Course
Level II - Certification Course
Level III - Certification Course

The Infrared Thermography Training Courses offered by FLIR Systems, Inc., are geared to infrared (IR) camera users of all skill levels. All courses focus on IR camera use for a variety of condition monitoring/predictive maintenance applications. Attendees completing all training course requirements and thermography field assignments will receive Infrared Thermography Certification in their designated level.

Thermal Imaging - Building Investigations

The Building Investigations Application Course offered by FLIR Systems, Inc., focuses on educating the user in the theory and practice of using infrared thermography as a new, non-invasive building diagnostic and reporting tool.

Thermal Imaging - Building Science

Infrared building science is the application of infrared thermographic inspection techniques as a powerful and noninvasive means of monitoring and diagnosing the condition of buildings. IR cameras in the hands of trained thermographers can provide immediate documentation of as-built, pre- and post-restoration conditions, post-casualty Cause and Origin data, plumbing and building envelope water leakage, post-flood and fire water-damaged material assessment, energy use inefficiency, and electrical problems.

Insurance companies, restoration firms, building owners, and thermographers already involved in building maintenance and operations require a thorough applications training curriculum leading to certification in infrared building science. In response, the Infrared Training Center (ITC) - the global leader in infrared training - and the Building Science Institute (BSI) have developed a course for technicians and supervisors, and those wishing to receive Building Science Certification. These courses address the Best Practices of the cleaning and restoration industry with content drawn from extensive field experience in thermography and building construction. They include references to actual cases illustrating how IR thermography has pinpointed sources of building moisture, provided definitive Cause and Origin data, enabled energy savings, and prevented incipient catastrophes. Like all ITC courses, the Building Science series emphasizes practical real-world skill building, and includes infrared theory relevant to these skills.

Thermal Imaging Roofing

The Infrared Roof Inspection Training Course is tailored for new infrared camera users or practicing thermographers wanting focused training on roof moisture detection and roof inspection surveys. This two-day infrared training course discusses roofing types, typical problems, and how to perform IR inspections to detect roof moisture. The infrared roof inspection course includes details on the thermal imaging equipment needed, procedures, and safety issues. It also covers limitations based on roof construction, insulation type and weather conditions. How to prepare infrared roof inspection reports, survey follow ups, and tips for marketing and selling your services are also covered.

Safety Express Training

Respirator Training with Fit Testing

Have your staff fully protected with a complete and accurate quantitative fit test. This fit test takes less than 10 minutes for each of your employees. This test certification is valid for one year from the test date.

MSA SCBA Care and Use

In this half-day course you learn how to properly don and doff an SCBA safely and quickly, how to activate and turn off your SCBA, what to do during an emergency air failure, and complete a quick cylinder replacement. In addition you also learn how to clean and disinfect and conduct routine maintenance on your entire SCBA.

Confined Space Entry

The purpose of this one comprehensive program is to train and upgrade the participant in the changes to meet compliance under the Occupational Health & Safety Act and regulations which cover confined space competency as defined in the Act & Regulations for Ontario.

WHMIS General Information Training

If you have solvents, paints, inks or cleaners at your workplace, then you have hazardous materials, and under the WHMIS Regulation, general WHMIS training is your obligation. This course teaches your employees how to control hazards in the workplace, understand the intent of WHMIS legislation and legal responsibilities, the significance of Material Safety Data Sheets (MSDS), supplier and workplace labels and hazardous symbols, the hazard classifications, and their health effects.

WHMIS Review

This condensed refresher course reminds your employees of the basics on how to control hazards in the workplace. It also reviews the intent of WHMIS legislation and legal responsibilities, the significance of Material Safety Data Sheets (MSDS), supplier and workplace labels and hazardous symbols, the hazard classifications, and their health effects.

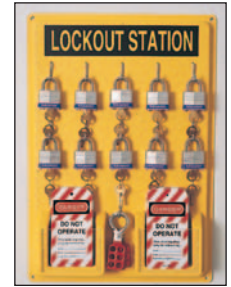

Fall Arrest Training

This training session is an instruction on the function and proper usage of fall arrest personal protective equipment with specific reference to the assigned equipment for the workplace.

Lockout Procedures Training

This introduction to lockout procedures makes it a must for anyone who does any kind of maintenance in your facility. The purpose of this program is to train or refresh and update the participant in identifying hazards requiring lockouts associated with uncontrolled energies.

Managers & Supervisors Training

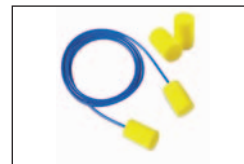

This training program helps to ensure that attendees meet the Occupational Health & Safety Act's requirements for competence for those in supervisory roles. Training such as this is compulsory under the Act and therefore helps the employer to be in compliance with the Act in this regard.

Lift Truck

The purpose of this program is to train the principles of safe lift truck operation. Hands-on demonstrations and a test confirm competency and certification upon successful completion. The participant gains an understanding of the Occupational Health & Safety Act and Industrial and Construction Regulations.

Asbestos Awareness - Worker or Supervisor

This full-day session deals with Asbestos awareness, which meets the requirements of the Ontario Occupational Health & Safety Act and the various regulations..

Noise Awareness Training

This training session is an instruction to the function and proper usage of hearing protective equipment with specific reference to the assigned equipment for the workplace.

Safety Committee Training

The purpose of this program is to provide the training and requirements for an effective health and safety committee, and make participants aware of the requirement of legal responsibilities and roles of members under the Occupational Health & Safety Act and Regulations for Ontario.

Thermal Imaging - Introduction

Our basic course offered by FLIR Systems, Inc., covers an introduction to infrared thermography and InfraCAM setup and operation with an emphasis on delivering an easy-to-understand and practical focus on infrared science and fundamentals of heat transfer.

Repair and Service

Need something fixed fast?
Call us at **800.465.3898** and we'll get it done.

We understand that once you purchase your equipment, you are not alone. With our factory-trained Repair and Service staff and our additional customer service support, we do everything within our power to make sure you are satisfied with the operation and maintenance of your equipment. From portable instrumentation to dehumidifiers, we are here for you.

Not interested in maintaining your own equipment? We work with you to set up a service maintenance agreement to ensure that your equipment is always in tiptop shape. This preventative maintenance helps reduce your down time and saves you money.

Testing

On our site, your site or the work site we provide testing 24/7.
Call us at 800.465.3898.

D.O.P. TESTING

If you're using HEPA filtered equipment, do you really know if it is working? Negative air machines and HEPA vacuums, by their very nature are prone to leakage. This is mainly because they are small and portable, and thus are transported from workplace to workplace in the backs of trucks. Here, they are subjected to substantial rough handling by workers. This action can create leaks in units that were previously tested, giving personnel a false sense of security. In essence, your units should be tested anytime they are transported from one workplace to another.

FIT TESTING

Are you sure you have the right fit? Do you know if you have the right fit? The correct fit is required by regulations. If you have never had your respirator fit tested before, or it hasn't been done in the last two years, then it is time to get your fit test. Safety Express Ltd. can test you on our site, on your site, or at the job site.
